

Real vehicle and inventory intelligence. In real time.

TotalTrax indoor tracking solutions turn ordinary material handling vehicles into "Smart Trucks" that can deliver up to 40% more productivity.

And TotalTrax solutions do more than just improve productivity. They boost fleet utilization, improve inventory accuracy, optimize your warehouse space and processes while enhancing safety, all in real time.

With the ability to automate data collection and utilize real time reporting and analysis, our smart truck technology can reduce or eliminate work associated with manual data collection, operator mistakes and accidents and their related costs.

Along with real time, inch-accurate visibility of all vehicles, operators and inventory movements, TotalTrax provides Equipment Monitoring and Fleet Management tools to track vehicle usage and impacts and implement driver access control and safety compliance allowing operations to run more efficiently, productively and safely. All of which helps cut costs and boost productivity from 10 - 40%.

TotalTrax has innovative solutions to meet your key operational needs.

- Equipment Monitoring
- Advanced Forklift Tracking Solutions
- Safety Improvement and Compliance
- Warehouse Optimization
- Fleet Management
- Inventory Management
- Labor Management
- Visibility, Reporting and Business Intelligence Tools

THERE'S A SMARTER WAY TO OPERATE.

TotalTrax smart truck solutions make your warehouse operations up to 40% more productive.

TotalTrax benefits go way beyond just smarter trucks.

- TotalTrax offers complete turnkey solutions for real time tracking and automated data capture for location and identification of lift trucks, drivers and their loads.
- Automated data collection eliminates manual processes, including hand scanning, record keeping, checklist compliance and outbound QA inspections and verifications to reduce shipping errors.
- Real time visibility of all vehicles and inventory provides rich operating data that was never available before.

- Automation means drivers can focus on driving which translates into more pallets moved per hour and fewer fork trucks required to handle the same workload.
- Works with commercially available RFID tags, bar code labels or RF scanning technologies.
- View routes and distances traveled by vehicles with and without a load, as well as by driver and by pallet ID, to maximize slotting, routing and fleet right-sizing opportunities.

- TotalTrax solutions interface with existing WMS and LMS systems.
- TotalTrax is easy to install and less expensive than traditional LMS systems.
- Ensure compliance with OSHA regulations, including automated safety checklists.
- Minimize downtime by performing repairs exactly when they're needed.
